

1.(new) A removable screening cover for a window in a door of a vehicle comprising,
a generally trapezoidal sheet of porous material sized to at least cover the window opening in
the door and being folded over to form a pocket along one edge thereof whereby the cover may be
fitted over the door and retained thereon;

the porous material having a degree of porosity to render objects on one side of the material to
be viewable from the other side of the material when installed over the window;

the sheet of material being of double thickness in the folded portion receiving the door;

the porous material further having a porosity to render it a barrier to flying insects.

2.(new) The cover of claim 1 wherein the porous material is elastic.

3.(new) The cover of claim 1 wherein the folded portion is disposed on two adjacent corners of
the trapezoidal shape and disposed to receive the door in tension.
